

# Mineralift

Better soil. Better nitrogen retention. Better yields.

**Healthy crops start with healthy soil, and healthy soil starts with the right application.**

In controlled trials, Mineralift stood up to the test, reintroducing to the soil key nutrients vital for strong cellular walls and robust plants; protecting against nitrogen depletion; and increasing yields up to 10% with its organic blend of mineral-rich basalt and humics.

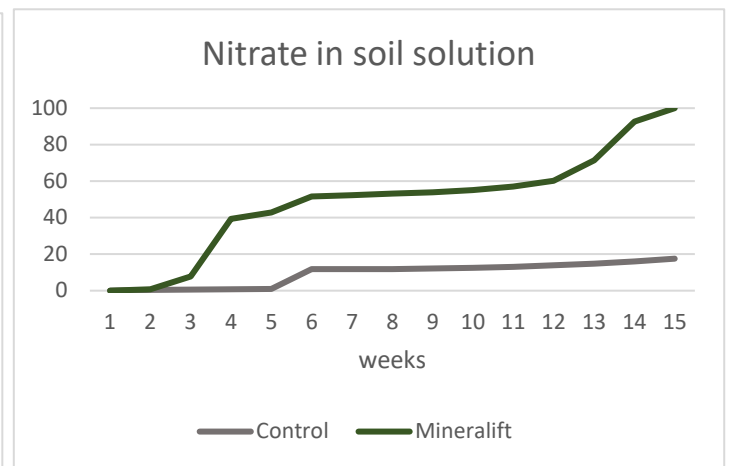

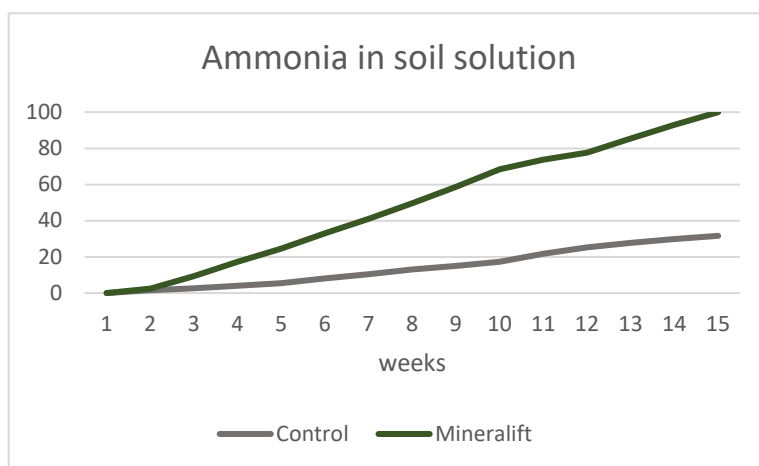

**Don't let nitrogen loss — or high product cost — impact your ROI.**

Mineralift is the only organic dry, easily incorporated product designed for bulk blends fertilizer, and proven to protect against volatilization and leaching in all weather conditions.

Whether you are losing nitrogen through volatilization or leaching Mineralift is the product for you.

**Because growing exceptional crops with high yields should be within your reach.**

Over 15 week period Mineralift stabilized ammonia N 68% and nitrate N 82%, reducing losses to the environment and increasing nutrient availability for the plant
